Open to remote (UK, EU & international) and relocation

PROFESSIONAL SUMMARY

AI Business Operations Specialist trained on a 12-week applied accelerator, pairing earlier hands-on experience in client service, administration and IT support with current skills in AI tools, process mapping, business analysis and AI governance. In a live consulting case study, audited a five-site, 25-staff healthcare group, isolated the three costliest operational constraints on its growth and set out a prioritised, costed AI and automation roadmap to clear them — then pitched the plan to the client founder. Methodical, quick to turn messy processes into documentation a team can actually follow, and comfortable explaining why a change is worth funding. Available immediately.

Target roles: AI Operations Specialist · AI Business Analyst · AI Adoption / Enablement Coordinator · AI Workflow Automation Specialist · Business Operations Coordinator · Operations Analyst · Process Improvement Assistant · Project Coordinator · PMO Assistant

SELECTED HIGHLIGHTS

- Delivered an end-to-end operational transformation for a five-site healthcare group — audit, charter, business analysis, process redesign, automation, governance, KPI dashboard and executive pitch — as a single, joined-up programme rather than a set of exercises.
- Built the governance side as carefully as the automation: an AI Governance Register and Vendor Due-Diligence Scorecard covering data protection, accuracy, bias and human-in-the-loop review, so every recommended AI use case could be defended, not just demonstrated.
- Uses ChatGPT and Claude daily for research, analysis, process documentation and stakeholder communication — quality-checking every output for accuracy, tone and data sensitivity before it is used.

CORE COMPETENCIES

Operations & Improvement: Business Operations · Operational Audit · Process Mapping (as-is / to-be) · Process Improvement · SOP Development · Workflow Automation

Analysis & Reporting: Business Analysis · Requirements Gathering · SWOT Analysis · Stakeholder Mapping · KPI Reporting & Dashboards · Data Analysis

Delivery & Communication: Project Coordination · Project Charters · Risk & Issue Logs · Documentation · Prioritisation · Executive Reporting & Presentations

AI Enablement & Governance: Prompt Engineering · AI Use-Case Identification · Output Quality Review · Responsible AI Use & Governance · AI Vendor Due Diligence

PROFESSIONAL EXPERIENCE & PRACTICAL TRAINING

AI Business Operations Specialist Programme — Cohort #1

July 2026 – September 2026

JesTech Academy | United Kingdom / Remote — graduated 24 September 2026

- Selected for Cohort #1 of a 12-week applied accelerator: 8–10 hours weekly building 17 assessed portfolio deliverables for a single consulting client, evaluated on delivered work rather than written exams.
- Curriculum covered:** business operations, project management, business analysis, process improvement and workflow automation, AI governance, data analysis and dashboarding, professional communication and executive presentation.
- Applied ChatGPT and Claude across research, analysis, process documentation and client communication, quality-checking every output for accuracy, tone and data sensitivity before use.
- Delivered to a weekly professional rhythm — Monday briefs, midweek office hours, live cohort sessions and Sunday submission deadlines — consistently meeting deadlines without supervision.

Administrative & Client Service Intern

May 2021

Acme Packaging Limited | Nigeria

- Acted as first point of contact for clients, handling enquiries and complaints through to resolution and protecting account relationships during busy production periods.
- Maintained the daily transaction record, keeping an accurate operational log that management relied on for reconciliation and reporting.
- Scheduled and coordinated internal meetings, produced minutes and tracked the resulting actions to completion.
- Produced client presentations, reports and design collateral in PowerPoint, and managed the company's social media accounts and customer correspondence.

IT Support Intern

January 2020

Success Computer Center | Nigeria

- Resolved client-reported hardware and software issues across printers, workstations and servers, escalating cleanly where a fix sat outside my remit.
- Supported software installation, patching and updates across client machines, and assisted with maintenance of the company network.
- Logged and reported daily support activity to the supervisor — the habit of documenting work so that patterns, not just incidents, became visible.

PROJECTS & PORTFOLIO

Brightpath Health Clinic — End-to-End Business Transformation

July – September 2026

Consulting case study: 5 clinics, 25 staff, approx. £2m revenue, West Midlands | Full portfolio (17 pieces, complete 24 September 2026) at [add portfolio URL]

- **Operations audit** — examined all five sites and 25 staff, isolating manual appointment scheduling, decentralised patient records and the absence of management reporting as the three costliest constraints on growth.
- **Project charter** — defined scope, milestones, RACI, assumptions, risks and success measures, giving the client sponsor a single approved baseline for what would be delivered and when.
- **Business analysis report** — SWOT analysis and stakeholder mapping across clinical, administrative, ownership and patient groups, translated into prioritised requirements and a change sequence based on influence and resistance.
- **Process mapping** — documented current-state workflows for booking, patient intake, records and billing hand-off, then designed future-state versions that removed duplicated data entry and the SOPs needed to run them.
- **Automation proposal** — specified AI and workflow automation for the highest-impact bottlenecks with per-workflow cost, effort and projected time-saving, plus governance guardrails: human review points, data-handling rules and clear escalation.
- **KPI dashboard** — built a management dashboard in Looker Studio giving leadership its first single view of appointment utilisation, no-show rates, revenue by site and staff workload.
- **AI Governance Register & Vendor Due-Diligence Scorecard** — logged each AI use case against risk, ownership and data sensitivity, and scored candidate vendors on security, compliance, cost and fit to produce a defensible recommendation.
- **Executive pitch** — presented the full transformation case and roadmap to the client founder, structured for a non-technical audience and a funding decision.
- **Reusable AI assets** — a documented prompt library and workflow templates that let a team repeat the analysis without specialist support.

EDUCATION

Higher National Diploma / National Diploma

2017 – 2022

Auchi Polytechnic | Edo State, Nigeria

Secondary Education

2011 – 2016

Eweka Grammar School | Edo State, Nigeria

TOOLS & TECHNOLOGIES

Working proficiency: ChatGPT · Claude · Looker Studio · Microsoft Office (Excel, Word, PowerPoint) · Google Workspace · Google Sheets CRM

Building expertise now in: Advanced Excel (pivot tables, Power Query) · Power BI · Workflow automation platforms (Power Automate / Make / Zapier)
